Speaker's Bio

Brian Kelly

Brian is currently an Area Manager for NIBCO INC Headquartered in Elkhart Indiana. He is based out of Pittsburgh Pennsylvania and travels throughout Western/Central Pennsylvania and Western New York.

NIBCO is a 5th Generation Privately / Employee owned Family Business with over 3000 associates and 11 manufacturing Plants across the United States. Core Products include Copper and Plastic Fittings, Valves and Controls, PEX and Specialty Groups.

Brian began his career, after attending the University of Dayton where he graduated with a BA in Public Administration, working for NIBCO Industrial. It was during this time he learned the basics of his future career path. In the 1980's he spent 5 years with Milwaukee Valve expanding this base knowledge of Flow Control Products.

In the 1990's, an opportunity arose to work with Grinnell Corporation launching a new product, Gruvlok Grooved Fittings as well as specializing in Engineered Hangers.

Brian returned to NIBCO in 1999 as a Product Engineer and now Area Manager, focusing on new launches of NIBCO Press, NIBCO PEX and the expansion of their Actuation and Controls Division and has worked there for the last 15 Years.

Brian is incredibly proud to be a Core Member of one of the finest American Manufacturing Companies, still remaining today.

Model RV/RVE

Energy Recovery Rooftop Ventilator with Packaged Cooling & Heating

- 10% - 100% Outdoor Air Capacity
- 800 - 9,500 CFM
- 3.0 in. wg External Static Pressure
- Indirect Gas, Hot Water, Electric Heating
- Packaged DX (5-30 tons), Chilled Water, Split DX Cooling
- Optional Energy Recovery
- Optional Return Air
- Optional Hot Gas Reheat
- Optional Digital Scroll (Copeland) Compressors Allow for Full Modulation
- Supply Plenum Fan for Optional Bottom and True Side Discharge

Meeting Outdoor Air Design *Challenges*

The model RV(E) is a pre-engineered rooftop ventilation unit specifically designed to condition and deliver mixtures of outdoor and return air to a building. Varying outdoor air conditions and building loads create a serious challenge for any HVAC system. To overcome these challenges, the RV(E) includes value added features such as a factory mounted variable frequency drive (VFD) for supply air volume control, outdoor and return air dampers for mixed air control, and an onboard microprocessor system for precise temperature and humidity control. Pre-engineered features provide semi-custom flexibility while maintaining the quality, consistency, and value of a standardized product.

President's Message

Dear members,

I hope you are all managing to stay warm as this Tundra continues to hit our area. I also hope those of you that attended last month's meeting enjoyed the presentation from the Penn State Theme Park Engineering Group.

This month, we will be holding our annual joint meeting with the Johnstown Chapter of ASPE at the Boulevard Grille. I'm very excited to introduce this topic as there are certainly many questions that come up in regards to pipe joinery methods in our industry; both Mechanical and Plumbing disciplines. The Johnstown Chapter of ASHRAE welcomes Brian Kelly from NIBCO. He will be presenting on traditional and alternative pipe joinery methods with an emphasis on "press" systems for both plumbing and HVAC systems.

At most of our meetings this year the chapter has been focusing on topics that were generated from our survey conducted last year. We will be conducting another similar survey in the near future. Please take a few minutes out of your busy schedules and submit critical feedback so our chapter can better serve you, our valued members.

As we near this year's fiscal end, please consider donating to ASHRAE Research Promotion if you have not thus far. If you have already donated, THANK YOU. The Johnstown Chapter is very close to surpassing our goal again this year. Please help us continue this trend by donating today. If you have questions, comments, or need assistance in the donating process, please don't hesitate to contact myself, RP Chair Cory Eberhart, or any member of the board.

Please stay tuned for additional details for our final upcoming meetings and plant tour in the spring.

See you at the meeting,

Dave Anderson

HERE'S A BRIGHT IDEA

Reduce Energy Costs by Creating A Better Building with Intelligent Building Automation and Control

VYKON makes better buildings – ones that are smarter, use less energy, are more efficient, have lower operating costs, are safer, and contribute to a sustainable environment.

VYKON's scalable, modular architecture is designed to meet the needs of today's fast-changing, fast-growing enterprises, whether it's a single facility, multi-building environment, or global application.

Built on the Niagara^{AX} Framework®, VYKON intelligent building solutions integrate open and proprietary building automation systems, energy management, lighting, video, and security.
